

ADELAIDE NORTH SPECIAL SCHOOL - SHADE STRUCTURES

Project Scope: Adelaide North Special School - Shade Structures

This project consisted of the erection of five hot dipped galvanised steel structures with hardwood roof purlins over existing recessed trampolines and existing soft-fall areas. Colourbond and Danaplon were installed respectively to each of the structures to maintain natural lighting levels. Roof water was discharged via new downpipes and underground pipework connecting to existing infrastructure. Bitumen pavements were made good along with new soft-fall.
