

TELSTRA STORE RUNDLE MALL - BASE BUILDING WORKS

Project Scope: Telstra Store Rundle Mall Base Build

This project involved the demolition of the existing Bank SA facility and completion of the base build works to suit the layout of the new Telstra store. This required rerouting existing services and installing new services to suit, adding wall & ceiling framing and linings, building up the existing floor substrate, painting, etc.

In addition to the internal base build, we also modified the existing canopy to suit a new glazed roof, cladded, rendered and painted the front façade, and installed decorative metal blades/fins and perforated screens to the windows above the ground floor.
